

MLK

- the most important files are commented
- folder structure is shown as well

- right place?
- right content?

LICENSE

doc

- necessary ???

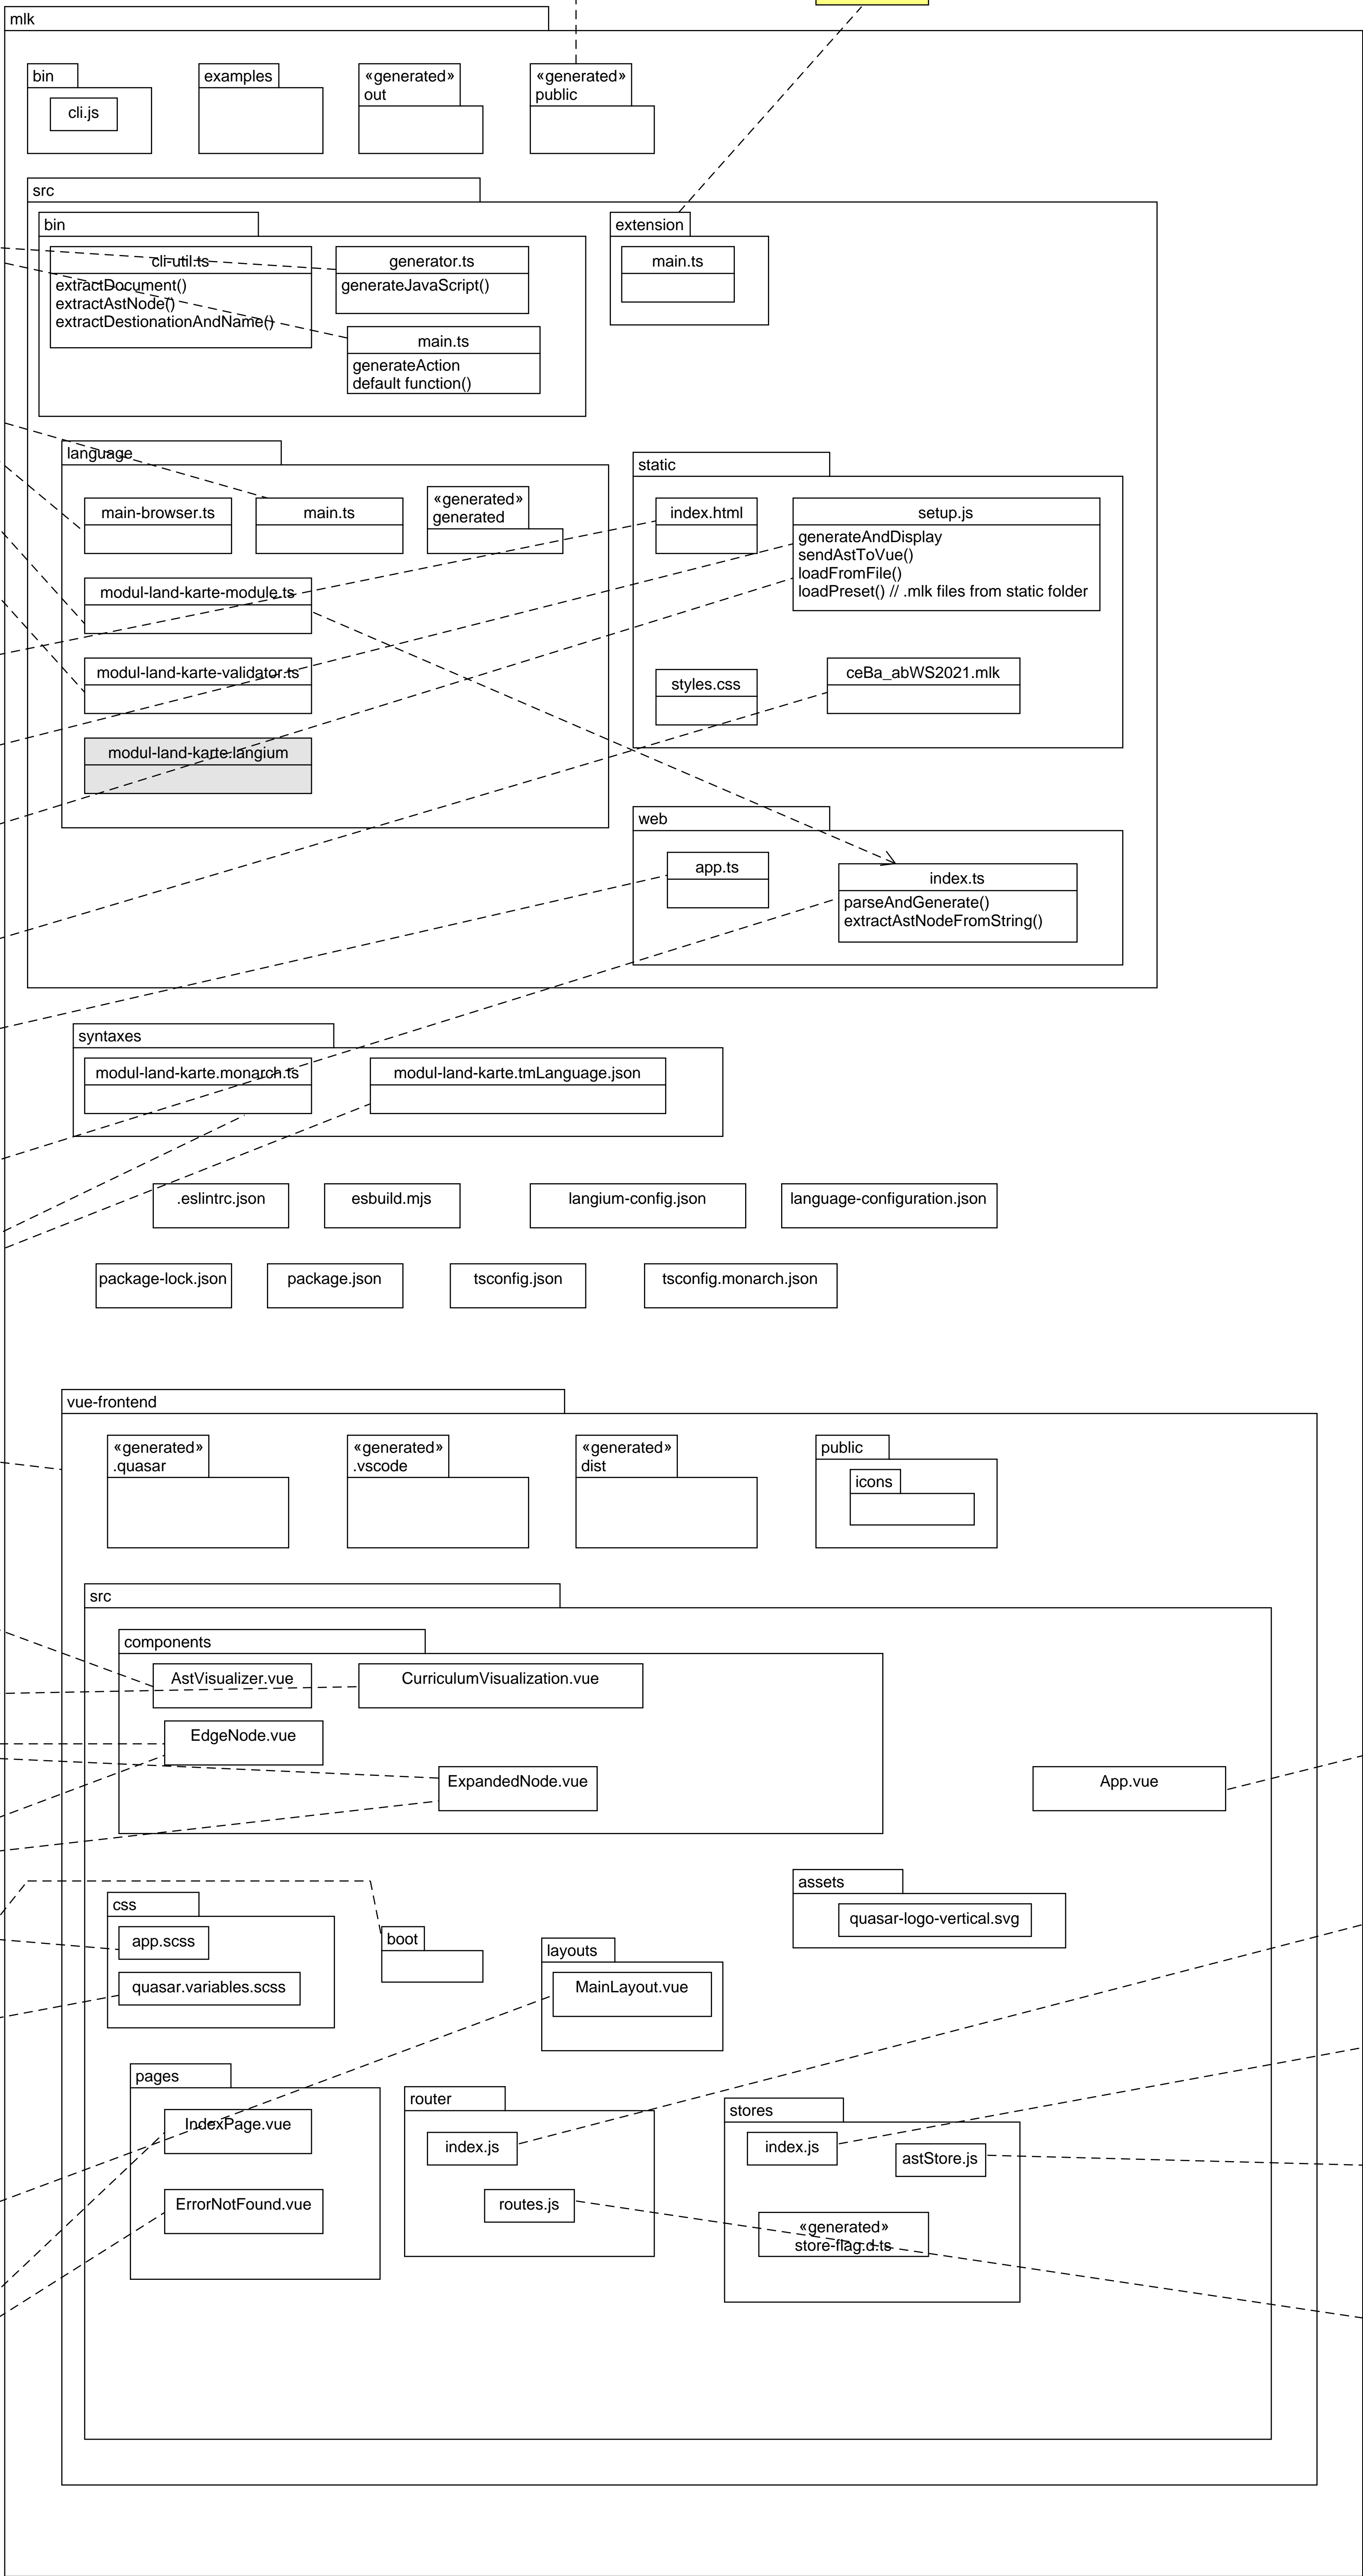

package-lock.json

- very laconic

README.md

- so far not fully generated
- used also for static content

generic code

- probably not needed

generic code

CommandHandler for parseAndGenerate implemented here

- still empty

- implements webpage-structure
- buttons are defined here
- invokes window.generateAndDisplay

- far too long default input code

- provides default input
- invokes 'parseAndGenerate'
- add event-listener for button-clicks
-

- should be removed from here
- perhaps to be substituted by tutorial-input

- uses express-lib ?!
- listens on port 3000

- much code is commented out

- looks generated

- separate project to be built
- depends on QUASAR-framework

- provides curriculumData from AstStore

- large file
- heart of visualization

bad names

- shows detailed dependency information

- shows detailed Module information

- empty

- concrete values for (theme) variables

- defines main structure of web-site
- template uses quasar-elements

- defined components 'IndexPage', 'ErrorNotFound'

- listens on port 3000
- template delegates to <router-view/>

- depends on vue-router

- external dependency to pinia

- extracts from AST necessary information :-(
-- has to be adapted every time the grammar changes

- only Main-page or Error-page are routed
